

CLIENT CASE STUDY: **Fell Brewery**

Preparing for electric vehicles, reducing delivery emissions and tackling food waste

Tim Bloomer and the team at Fell Brewery have put sustainability at the core of their business. They are passionate about making beer and protecting the beautiful South Lakes landscape they brew in.

Having installed a large solar PV array on the roof of Fell Brewery in October 2022, they are already feeling the benefits of 'going green', from engagement with customers and staff, to reduced energy bills.

"The W&F Green Enterprise Hub has managed to put together a package of tools, advice and assistance that raises the bar in user friendly, results focused sustainability support for small businesses. We have benefited hugely from what's on offer and intend to engage with the Hub long into the future," says Tim Bloomer, founder of Fell Brewery.

They received free EV charge point advice from ENW (to get ready for the electric vehicle changes that are coming) and they also had an Electric Vehicle Advice Visit with EV expert Simon Brace, because the brewery deliver beer locally and know this affects their carbon footprint.

Tim says: "I have to say that I think Simon is fantastic. He has been incredibly eye opening for us ... he is a freelance delivery driver who covers 50,000 miles a year around Cumbrian roads in a van. He's the real deal."

Tim says:

"The W&F Green Enterprise Hub has managed to put together a package of tools, advice and assistance that raises the bar in user friendly, results focused sustainability support for small businesses."
